

Please, please keep the local "feeds" of traffic and weather for XM Satellite Radio. I live in the Tampa Bay area and this NECESSARY PUBLIC INFORMATION is extremely vital, especially as we approach the 2004 hurricane season and beyond. Forecasters predict that hurricanes and the seasons that follow will get stronger more intense with the storms that they produce; therefore, unlimited, uninterrupted satellite feeds of local traffic and weather are essential to evacuations and saving lives. The traffic issues in the major metropolitan cities are important to the ever growing population of the 21st century. Also Amber alerts are broadcasted on XM Satellite Radio and will help to catch the bad guys and to save lives of innocent children. Thanks for listening!~

Tony
